Recursive Icon Explorer is a simple program that makes icon searching easy. Recursive icon explorer scans every Windows directory, including the Windows/System folder, to find all files and folders with icons. Recursive icon explorer does not perform a disk scan, but instead simply looks at all the icon properties in Windows to find icon files. With Recursive icon explorer you can search for icon files on a single folder or a multi-folder path. With a little patience, you can find all the icons you are looking for. Just start the program, define a search path and press 'Go'. The program will search for your specified path for any icon file. You can also select icon types that the program will search for, such as Portable Network Graphics (PNG), Icon Format (ICO), BMP, JPG, GIF, TIF, PLT, EMF and many other icon types. Now you can simply select icons that you want to copy and drag them onto any window. Just like that you have a complete set of icons on your desktop.
