Rating: 5 Posted: 2018-03-05 Review By: Ingrid User Rating: 1 of 5 stars Weak This app has many features which is great but I noticed a lot of issues which affect the quality of the result obtained. For example: - the app will fail calculating the parameters of my HPLC unit. - the results returned are the same as those obtained by the official HPLC module itself. - The app does not recognize my chemstation 1020. - It won't calculate for values lower than 0.001l/ml. I also find the user interface very confusing as in the few cases I managed to calculate something, I found the result so complicated that I ended up using a calculator. Similar to Humidity Cal I am grateful for the application... I am grateful for the application... As noted above, The Matrix is very restrictive on hardware requirements, with an emphasis on using PC hardware that is the absolute minimum for a basic computer to handle. It is also rather temperamental on different computers, having glitches here and there. If you have an older computer with limited memory or a slow processor, it is best to wait until we have a version that is optimized for your computer. With that said, The Matrix is tested and should work on a wide variety of computers and operating systems (Mac, Linux, Windows). We have tested it on everything from top of
