Nov 9, 2009 - 2) Any PNA running Windows CE 5.0 kernel 3) Most PNA devices running Windows CE 4.2 kernel 4) Any Windows Mobile 5.0 or 6.5 devices ... PNAs that have access to the global Internet using WLAN or GPRS. Unlike other types of PNAs that have the ability to receive data via the Internet, WLAN or GPRS, most Windows Mobile-based PDAs do not have access to the Internet. WLAN and GPRS are two ways of accessing the Internet that allow PDAs to access the global network. WLAN is Wi-Fi, that is, a wireless local area network. WLAN is used to connect to the Internet through a base station. It is usually used to connect to the Internet, but can be used for other tasks. In this guide, we will show you how to use the WLAN application to check your Wi-Fi settings. If you have a question, we can answer it in the comments, which you can find here. The WLAN app has two uses: 1) Check Wi-Fi settings. After you click the "Check Wi-Fi Settings" button on the home screen, a new window will open to check your Wi-Fi settings.
