Architects design 3D objects in 3D Studio MAX and

The BBC's business editor Robert Peston says if Americans had the same political and

regulatory structure as the British they would have better financial regulation and a lower debt burden. He was speaking in his regular weekly column for the New York Times. "A friend and former business associate of mine is a native of Portland, Oregon and he has always felt the same way about his homeland as many other Americans do: he likes many things about it, but he is baffled by its political system. "Why are the political parties so much more interested in gerrymandering than in producing good policy? Why are

governors so eager to spend their time campaigning, rather than fixing their states? Why are Americans so willing to elect political hot shots like Donald Trump, when an American president who had the same national celebrity status as Trump is almost certain to get a better government deal from Washington? "These are the sorts of questions that I asked myself when I was thinking about writing this column. "I started wondering why a nation like the United States should not be as well regulated as any other nation on earth.

Why shouldn't it have the same kind of political system that most other nations have?" 'Dispute over sand' "I decided that the answer was: not only because Americans would be better off, but because the nation would be better off, too." He went on to explain that a key reason for the differing political culture of the US is that no national party has managed to win an outright majority in national elections for most of the past 100 years. "The big problem for any party with less than half the vote is that it has no way to exert power. It can't

form a government with a simple majority of the legislature and a simple majority of the population. Instead, the party that wins the election has to persuade the opposing party to surrender some of its rights in exchange for a promise to support the party's policies.

Jump to text: Rapidly send and incorporate feedback into your designs. Import feedback from printed paper or PDFs and add changes to your drawings

automatically, without additional drawing steps. AutoCAD includes a new Markup function that is useful for embedding directly into your design any changes you make to a drawing. Draw changes on the fly and send them to your designer without having to draw or send an external file. This new feature is called Markup Import and Markup Assist (MI-MA). The process is simple. If you design or annotate your drawing, you can choose to export the drawing or not. From there, if you choose to export your design, a copy of your

current drawing is saved in a separate folder. You then can apply changes from the PDF or other file you uploaded to your current drawing, and all changes are applied at once. If you don't export your drawing, changes are not applied automatically to your current drawing. A new feature, Markup Assist, provides additional functionality to help you import a change into your drawing in a matter of seconds. There is no need to draw the changes to your design. You can use a Markup Assist tool to add content to your drawing and

select the drawing itself or the section to which you want to apply the change. A Markup Assist tool includes several ready-made options that you can use to do the following:

- Apply a background color to a section
