Fonts Many computer fonts are designed to be used in a specific size or point size. If you want a certain font to be used on your web page, you have to use the web version of the font, which usually has a smaller point size. There are quite a few web-only fonts available. Microsoft created a public family of fonts called Segoe in 2002. Photoshop also lets you use a font that will work on any size device. You only need one font. This font is called Times New Roman in Photoshop. All that is needed for it to look right is a font that has the same letters and shapes of Times New Roman. Other fonts that can be used for this are Garamond and Arial. Effects Photoshop comes with a number of unique effects, including rainbow filter, blur, soft light, and wave. The Wave tool lets you create waves in an image. The default wave in Photoshop is a series of rainbow-colored circles, but there are other possibilities. The result looks beautiful in the right spot. The rainbow filter makes everything look brighter. When you use the saturate filter you change the saturation of all colors in the image. You can get some really fancy effects from Photoshop; you need to understand the basics of what you are doing to achieve the look you want. Effects can be applied to the whole picture or to just parts of the image. To apply effects to part of the picture, click on the area you want to apply the effect to. Photoshop will then apply it to this area. This feature is especially useful if you are trying to make a colorful picture look less colorful. You can click on the image to do this, or you can use the magic wand to select the pixels you want to apply the effect to. There are about 60 effects, such as the Shake, Blur, and Spatter. They can be used on photos and on graphics. Tools You don't always need an effect in Photoshop. Sometimes you just want to make a change or cut some of the parts out of an image. The tools are especially helpful for this. The Pen tool is used for drawing lines and shapes. You can draw with a fine or wide tip. You can draw with several colors. The tool works in different ways. The Paint Bucket tool is used to select an area of an image. This can be used to make changes to an area of an image. This can also be

Spectrophotometric determination of chlorpromazine hydrochloride with Trolox C and sulphonic acid derivatives as the reagent-developing agents. Optimization of the photometric reaction involving the reaction of chlorpromazine hydrochloride (CPZ) with Trolox C and sulphonic acid derivatives in the presence of ortho-phenylenediamine (OPD) has been carried out. The reaction is followed by the decrease of absorbance of the resulting dye at 494 nm. The method is based on measuring the absorbance of OP (OD) which increases with increasing absorbance of the resulting complex. The method was applied to CPZ tablets analysis and the results were compared with the reported method. The method is based on the reaction between free hydroxyl groups of the drug and -COOH groups of the drug of OPD leading to the formation of a complex with absorption maxima at 494 nm. The reaction rate and the concentration of the reagent OPD were determined according to the absorbance of the final reaction product at 494 nm. The optimum reaction conditions were found to be pH 6.5, 10 microM OPD, 90 microM Trolox C and ratio of the amounts of reagent to CPZ (1.4 x 10(-4) M) for measuring 200 microg/ml CPZ. The proposed method was applied to the determination of CPZ in pharmaceutical dosage form. The results were compared with those obtained using the reported spectrophotometric method.Q: Java generic types Why does the following code (from RuntimeException.getStackTrace(int)) return a StackTraceElement array not of type[]? private static StackTraceElement[] getStackTraceElement(int i, T t) { return t.getStackTraceElement(i); } Also, I fail to understand why is the following possible: private static StackTraceElement getStackTraceElement(int i, T t) { Also, does anybody have a clear explanation on the first question, and an explanation on why I can call t.getStackTraceElement(i) Thanks A: Why does the following code (from RuntimeException.getStackTrace(int)) return a StackTraceElement array
