1. Field of the Invention The present invention relates to a method of producing a rolled product, especially a rolled product of copper-containing material. 2. Description of the Related Art In rolling copper-containing material, a product such as a strip, plate, or bar is rolled by a continuously operating rolling mill, wherein the sheet of metal is fed from a stock roll to a delivery roll. In the work center of the continuously operating rolling mill, a plurality of rollers are installed, and the metal sheet is rolled by rotationally moving these rollers in the widthwise direction of the metal sheet. A material/die pair (assist: die) is press-fitted between every roller and the respective shaft of the rollers that rotate, to allow the material to be rolled in a predetermined thickness. At the time of rolling, the metal sheet is supported by the rollers, and is rolled by pressing the rollers in the direction perpendicular to the direction of the metal sheet width. As a result of the rolling, the metal sheet is formed into the desired shape such as a flat plate. In this manner, a metal strip is manufactured by rolling, for example, and then cutting the metal strip at the center. The widthwise edge portions of the metal strip are then removed, so that the metal strip is formed into a desired shape by a bending press or the like. For example, Japanese Unexamined Patent Application Publication No. 2-298631 describes a rolling method by which an electrode for a storage battery or a copper-containing material is rolled in a predetermined thickness, so that a tubular body having a predetermined section is formed. Subsequently, in the tubular body, a predetermined portion is plastically deformed, thereby forming a formed plate having a predetermined shape. The formed plate is then sliced into the desired shape. Japanese Unexamined Patent Application Publication No. 2000-134633 describes a rolling method for forming a mesh member, wherein a plurality of meshes are formed in a strip shape, and a plurality of cross-wires of a fine wire are formed in parallel to each other by rolling. Subsequently, the strips of mesh are formed into a plate-like product by pressing, so as to manufacture a steel plate for a steel cord.1. Field of the Invention This invention relates to fire resistant foam components and more particularly to foam formulations which are resistant to fire. The use of the foam components in the construction of buildings is exemplified. 2

A Federação Portuguesa de Futebol (FPF) anunciou, nesta terça-feira (14), que irá vender os imóveis no Estádio dos Estudantes, em Coimbra, no Centro Histórico, pelo preço de mercado. A Federação garante que a venda será "não-profit", já que este estádio "não tem um fornecedor especializado, mas sim um fornecedor a mais em Portugal que pode fornecer a esta situação especial o que é necessário". Tudo só depois de terem sido concluídas as reformas estruturais, estáticas e económicas das águias. As obras do Estádio dos Estudantes, pertencente à Conferência dos Presidentes da FPF, irão começar imediatamente, tendo em conta a estreia da equipa de futebol, daí que a remodelação do estádio seja a realização de trabalho de alto risco. "Uma das águias" acaba de deixar a equipa de futebol já em campo Também não deve demorar o processo de reforma dos estádios. O Estádio dos Estudantes, também conhecido como Estádio da Universidade, é a "única casa" da equipa de futebol, já que o Algarve e o Alentejo são os dois estádios onde os jogadores de futebol são treinados. The 'war on drugs' has gone on for too long. And it has failed. So much for the new drug war, the deadliest war. There is only one winner of the War on Drugs. And it has not been the violent drug cartels and drug gangs. The winner is the drug dealer. It will take considerable effort and resources to stop them. The
