What's New in the Classic Style Menus And Toolbars For PowerPoint 2007?

Classic Style Menus and Toolbars for PowerPoint is a useful add-in which brings the old menus in the newer versions of Microsoft PowerPoint. On the mechanism of the retro-inhibition observed for the thiol-dependent synthesis of CO₂ using acrolein. The thiol-dependent synthetic carbodiimide, acrolein, undergoes an oxygen-dependent retro-inhibition in the absence of a ligating thiol. Factors affecting the retro-inhibition for acrolein include the concentration of the thiol; carbon monoxide; a constant ratio between the thiol and acrolein; and the presence of various substituted thiols and aldehydes. It is suggested that the retro-inhibition for acrolein results from a specific rearrangement of the thiolate anion, $-S-X-SR$, to a thiolate neutral radical, $-S-SR$, subsequent to the retro-dehydration of the thiol-acrolein adduct, $-S-X-SR + CO$.

Q: Moving a polygon along another in canvas/jQuery I'm trying to move a Polygon along another. The two polygons are stored inside a div and they go in opposite directions. The moving of the first polygon is correctly done. I've been using for testing purposes. The polygon can be dragged around the page and also the canvas/canvas area, that's normal. But as soon as I release the mouse

but the polygon is drawn in a weird position. Here's my code, inspired by that demo

```
$(function() { // canvas is the wrapper div
var canvas = $('#plane');
var plane = new Flotr.Polygon(canvas, {
points: [[0,0], [0,20], [20, 0], [20, 20], [0,20]],
```
