The following tips can help you reduce time spent in Photoshop:

- * Split your photo into layers. Doing so can save you hours of time and frustration.
- * Save as frequently as you can and export file formats as you go. At times, it's better to export than to edit.
- * Create layers. Layers are a great way to separate edits from photos.
- * Use Actions (see the next section) to speed the process of creating, editing, and saving files.
- * Use layers to save time. Many of the tools are designed for layer files. (See the next section for details.)

Saving Your Stuff Saving your image to a file is the most important aspect of your editing. You save your work every time you start a new project or do anything significant to your project; this way, you can go back to it later. As with many things in digital photography, there are different file types you can save to, depending on your needs and the equipment you have to save the file on. The most important thing is to figure out what file format you need to save your image as (see the upcoming section "Choosing a file format"). If your photos need to be printed on a commercial scale, you usually need to save the image as an uncompressed TIFF file. TIFFs are good for large-scale printing and are compressed by default, so there is no loss of image quality. Most digital cameras save the images as jpg files. These files are compressed by default, but you can lose quality when you reduce the size of the image. Jpgs are ideal for sharing on the web, but not as good for printing. If you have a lot of images to edit and want to share them all online, you need to consider the idea of saving a web-optimized jpg. This file contains advanced in-camera settings for output quality. A web-optimized jpg offers a smaller file size without sacrificing quality.

File Formats How your images are saved is dictated by the file format. Different file types have different advantages, and the most popular are listed in Table 2-1. But there are also compression methods included in some file formats. You can use different file formats to save different types of files (such as jpg and tiff).
