Ce mémoire est la traduction d'un texte écrit par l'Assemblée Nationale pour une partie de ses travaux législatifs. Il s'agit d'un mémoire législatif par lequel la Chambre des députés et le Sénat exigent une période de mémoire nationale dans la loi. Les mémoires législatifs sont la façon dont le Parlement européen exige des lois, de nouvelles décisions ou des modifications de l'ancienne. L'Assemblée Nationale demande à son activité, les Conseils des ministres de lui transmettre une série de textes, rédigés dans le cadre de la préparation de l'activité législative du Parlement. Les membres du parlement peuvent alors exiger une période de mémoire nationale pour ces textes. Lorsqu'un texte législatif est soumis à

The striker is usually part of a striker plate that is attached to the casing of the latch at the side of the door. The striker plate is inserted into and extends across the thickness of the hinge plate that is attached to the door and that defines the open side of the hinge. The striker plate is usually provided as an extension of the door casing. After the latch bar is inserted into the slot in the striker plate and after the latch bar has been pivoted to lock, the striker plate is held in place by staking the edges of the striker plate against the casing of the door. If the door is later removed from the casing, it is possible to remove the hinges from the door to remove the door without moving the striker plate. Several different types of latch mechanisms are known.

In multiple sclerosis (MS), the lack of suitable animal models has slowed the progress of development of treatment strategies to ameliorate cognitive impairment. Therefore, we performed a study to investigate the effects of the acetylcholinesterase inhibitor rivastigmine on the post-traumatic brain injury (TBI)-associated cognitive impairments in a chronic neurotrauma model in male Sprague-Dawley rats. Rats were exposed to a controlled cortical impact (CCI) or sham injury and were treated for 28 days with vehicle (saline), rivastigmine (1, 3 or 6 mg/kg, once daily), or donepezil (10 mg/kg, twice daily). At 7 days post-TBI, we observed that animals exposed to the CCI injury significantly worsened their performance in the Morris water maze, open field, elevated plus maze, Novel Object Recognition (NOR), and Y-maze tests. This worsening was accompanied by a decrease in extracellular matrix degradation product levels in the hippocampus. Rivastigmine significantly prevented the post-TBI worsening of cognitive function. This effect was most dramatic in the water maze and NOR tests. No significant differences were observed in the spatial working and long-term memory tests. Rivastigmine was more effective at improving T
