The  $U(1)$  gauge symmetries can be promoted to local (maximal) gauge symmetries for which  $A_{\mu}$  is embedded in the Cartan subalgebra of the  $\mathcal{N}=4$  gauged supergravity. In this work we have also extended the range of  $U(1)$  global-gauge theories starting at the theories where the  $U(1)$  gauge field is coupled to one neutral scalar field which is in the spectrum of  $\mathcal{N}=2$  theory. The extension to theories with two or more neutral scalar fields can be done similarly. For example, a  $U(1)$  gauge field coupled to two or more neutral scalar fields will give an embedding of the  $U(1)$  gauge theory in the  $\mathcal{N}$
