you'll find a wide variety of various encode levels, including bitrate control, range control, frame size control, bitrate control, setting in/out scan rate, setting in or scan lines, scan pattern, encoder clip guide, composite, and settings in/out. you can set the number of chapters, and choose the audio track. i particularly liked the video and audio menus, which give you many options for adjusting the video and audio. editing menus provide a lot of control over how and where titles, credits and other information are presented on the disc. the action settings menu is for those of you who want to run more complex tasks such as setting the play count, or converting the disc to a different format. finally, the file menu is similar to that of an editing program; you can save an edited project for use at a later time, or keep just the bitrates and settings as the final file, then burn another disc from the original. after encoding and editing the video, as well as assigning titles, chapters and menus, you'll be directed to a main menu called the burn menu. this menu presents a typical dvd menu, with options for selecting each of the menus you created; up to nine. you can also choose the settings for each. you can preview each of the menus before burn and select where you'd like the menus to appear on your discs, as well as decide on whether you want to keep the original dvd-video file or burn a more mature dvd-video file. you can also choose the default settings for the disc, such as the number of chapters and the play count. the burn menu is a fairly straightforward menu. there are several settings for each of the separate menus, which let you choose where they appear on the disc, along with the number of chapters. the disc will also play in any dvd players, but from the menu created with the program, you can choose to either send a disc straight to your home dvd player or to burn multiple discs at once. both are useful.
