when windows recognizes the modem, it opens a dialogue box where you can specify the phone3g username, password, and the phone3g network. then, you can connect to the phone3g network via the current internet connection. this step may take a while, depending on the network/proxy settings of your computer. to check your internet connection, you can ping a site such as google.com. when the network is functioning properly, you will receive a response. unfortunately, in my experience, this method does not work very well for dialup and network problems. you may be able to find other ways to check your network conditions. 1.direct connect to phone3g. this method can be used if you have a

direct dialup account or a broadband internet connection. by default, if you use this method you will be able to connect to a phone3g network, however, this is not guaranteed. with the new itunes version (v12.7.1) you can now use a virtual siri just like ios or os x. itunes is a great tool that allows you to manage your music library, organise your music, and transfer songs, audiobooks, and even tv shows to your iphone, ipad, or ipod touch. with icloud integration, you can even back up your data (music, movies, books, apps, etc.) to the apple cloud. the rest of this page will take you through all the features of v12.1. one of the best features is apple's new voice assistant siri. before apple made her available on the mac, itunes used to require a separate app for controlling itunes. now, with siri in itunes, you can use the voice assistant on your mac or pc, too. itunes 12.1
