order to do this, you'll need to download an application called airocrack-ng. airocrack-ng comes complete with an easy-to-use interface that is designed specifically for the purpose of cracking wireless networks. once you've got airocrack-ng installed and configured for the target network, just enter it in to the appropriate field. the program will then attempt to crack the network automatically. once the cracking of the network is complete, you can view a list of the network information, such as the name of the network, password length, and usernames. how do you make the apple airport connect to the computer? it automatically connects to the router i keep it set to connect at startup it doesn't seem to auto connect anymore but it has to be connected to the usb port to work i havent tried connecting it through usb yet it won't turn on if connected. i also tried connecting it through my wireless router with out the apple and it will turn on as long as it is connected to a free wifi signal. i have no idea what to do. airtort is another popular wireless lan password cracking tool. it can crack wep keys of wi-fi802.11b network. this tool basically operates by passively monitoring transmissions and then computing the encryption key when enough packets have been gathered. this tool is freely available for linux and windows platform. it is also simple to use. the tool has not been updated for around three years, but it seems that company behind this tool is now interested in further development. this tool is also directly involved in wep cracking and hence used widely. 5ec8ef588b
