## **FoopChat Client PC/Windows**

FoopChat Client is a standalone system designed to allow people to socialize privately and securely. FoopChat Client is perfect for families to keep in touch and share digital photos. It's also a great collaboration solution for businesses, allowing employees to have online meetings and share resources, all within the privacy of the corporate network. The FoopChat Client allows you to create an on-line messenger similar to AOL Instant Messenger, Yahoo! Messenger or Skype and send instant messages to and from your friends. This application has the following features:

- + Friends list - See which friends are currently online and their online status.
- + Chat - Private chat rooms, online and offline status of users.
- + Private chats - Create private chat rooms. Password protect them so only the other party can enter.
- + Messages - Enter a chat room, write a message, and send it. It is encrypted to protect your privacy. You can also customize your smilies (pictures that appear next to words) and send them with your messages.
- + Private conversations - See when your friends chat and keep a record of your conversations.
- + Personal information - View and change your own personal information on the client.
- + File transfers - See when your friends chat and keep a record of your conversations.
- + Vocabulary builder - View your friends' words and improve your vocabulary.
- + Upload and download files - Send files to or receive files from your friends.
- + Bandwidth capping - Limit the bandwidth you use on the internet.
- + Overall bandwidth capping - Limit all the users' bandwidth on the internet.
- + Mailslots - Send notes to your friends even while they're not online.
- + Directory access - See which users are in the directory.
- + Mini e-mail - Send notes to any user, instantly. It supports attachments.
- + Game support - Play games with your friends.
- + Desktop integration - Click on any folder, and you can drag and drop files to upload.
- + Supports all image types - Convert to different formats: jpg, gif, bmp, png, tif, tga, mng.
- + Supports all supported audio formats - Convert to different formats: mp3, mp4, wav, ogg, aiff.
- + Automatically resize pictures when sending them with a chat message - You don't need to do it manually.
- + Resize pictures to reduce their size.
- + Supports animated images (png/m
