IMPORTANT: Before downloading the application, please make sure that your computer has an installed version of IBM Notes running on it. A detailed guide on how to set up IBM Notes on your computer can be found here. Note: Please make sure that you have enough free space on your hard drive to install the software. SysInfoTools NSF Merge is a simple utility that allows you to convert NSF files into a format that can be easily managed in Windows. Once installed, the application will open after it has loaded the necessary components. Open the dialog that appears and you will be given the option to select the NSF files that you wish to convert. In addition to this, you will be able to set the output folder for the created databases. In the case of multiple folders, you will also be able to choose which folders should be used in the output databases. By default, the utility will create a new folder for each NSF database that is imported, but you will have the option of using the same folder for all the output files. If you are selecting multiple NSF files, SysInfoTools NSF Merge will only provide you with the option to merge each NSF database into a single file. Selecting this option will also create a new folder in the output location for each imported database. After having selected the necessary settings, you can click the Start button to begin the process. SysInfoTools NSF Merge creates a separate file for each NSF file that you have imported. The program will open each NSF file and open the list of contacts that are contained in it. The output folder is only displayed when SysInfoTools NSF Merge is used to convert multiple databases. The output databases will have the same structure as the NSF files that they are created from, and they will also have the same name. You can move the created files to another location by right-clicking on each output file and selecting the Move option. Before closing the application, you will be provided with the option to select the merge method that should be used to join the imported NSF files. SysInfoTools NSF Merge is a useful utility that can be used to convert Notes databases to an MS Outlook format. Version History: 0.1 - First release - Initial public release. 0.2 - Removed 2-stage (of sorts) installer 0.3 - Improved NSF Merge interface 0.4 - Added option to create

Notes file merge (NSF Merge) can be used to combine multiple NSF (Notes Storage Facility) files into a single one, allowing you to save disk space and simplify management. Notes file merge (NSF Merge) can be used to combine multiple NSF (Notes Storage Facility) files into a single one, allowing you to save disk space and simplify management. The program enables you to load any number of files to the processing queue, and it also comes equipped with a search function that makes it possible to find NSF databases that may be stored in unknown locations. Once the files have been imported, you can select one of the available merging methods. The application can join NSF files by creating a new folder for each created database, as well as combine all folders into a new NSF file. Alternatively, you have the option of only including contacts from the source databases. After selecting the desired merging method, you can specify if duplicate items should be removed. If this option is selected, you can also determine whether duplicate entries should be filtered by date. Moreover, SysInfoTools NSF Merge enables you to exclude the "All Documents" and "Trash" folders when processing your files in order to reduce the dimensions of the output databases and get rid of unnecessary items.
